

"Hearing loss among pilots, how manage this problem"

Dr. Marc-André Polet
ENT Expert Belgian CAA
Aeromedical Examiner Class 1 and all-classes

Hearing loss among pilots is a problem for us to solve.
This communication will be divided into four parts.

- Which are the EASA rules for each Class of pilot, ATCO and Cabin Crew ? Depending on the Class, the problem will be totally different.
- How to manage a hearing loss, what are the tests requested in these cases ? We will describe how we manage hearing loss when a real-life functional test is requested in the different classes.
- We will describe cases of hearing loss that have a distinctly different impact on flight understanding.
- What will be our attitude in particular cases such as: glider pilots, flights in areas where the use of radio is not mandatory, limitations to apply. These cases and also contradictions of the EASA rules will be discussed.
